Reward north extension in wide Mica vein set

20 May 2009

ASX Code : HEG, HEGOB

- New wide Reward M1 and M2 high grade zone extended 100 metres.

The Reward 640 level drive continues in coarse gold to the north along the Mica vein set with partial grades in the M1 alone of up to 420g/t gold over 0.3 metre. The drive is initially advancing along the M1 and then being stripped out to open the M2 in the hanging wall. Total grades over one ounce per tonne over the 3 metres width, including both the M1 and M2, have been intersected.

The drive extension opens up the Reward resource area to the north of the current workings for a further 100 metres. New production rises will be put in at 50 metre intervals for the wide Mica vein set and to access the high grade Paxton's above 671 level.

The 640 drive on the Mica vein set is advancing towards HHD29 at 1700N with 6.2g/t over 3 metres true width and sampling and assaying to delineate the zone on the 640 level continue.

The wider zones intersected in the Patriarch to Exhibition sections of the Hawkins Hill – Reward deposit, including Central Zone and the Mica, Steven's and Frenchman's vein sets, are currently being developed and drilled and results to date indicate a significant extension to resources.
